About us CIARKO

The Ciarko company, present on the market since 1989, is the biggest producer of high-quality hoods in Poland, held in high esteem in all of Europe. Knowledge and experience gathered for years allowed us to establish our position in OEM channel and to develop the recognisability of the brand Ciarko. Our products are sold on various markets, mainly in Poland, Germany, Scandinavia, Benelux and Russia. Ciarko manufactures range hoods (wall-mounted, rustic, island-mounted), universal hoods (under-cabinet, telescopic) and luxury hoods made from the best quality materials and components. All models of our devices are manufactured in Poland as the headquarters of the company is located in Sanok, in the Podkarpackie Region. At this site, in our laboratories we test all the sub-assemblies and components as well as the final product, which ensures the Ciarko guarantee of reliability. The high level of production process automation guarantees the high standard of quality. The market appreciates our brand, the innovativeness, the unique style and the design of Ciarko products, which is proven by many awards and prizes. In the last few years we have received the prestigious "Red dot design award" and many more polish and international prizes.

Annual
production
of hoods

800 000

600
Employees

Production
area

20 000 m²

30 Years'
experience

91% shares of OEM channel

Over 800,000 cooker hoods produced yearly

Over 1500 different product definitions

Approx. 25 new projects of cooker hoods yearly

Highest technical, reliability and safety standards in machinery park

Production complex located in Sanok, Poland

Most of Polish households equipped with our cooker hoods

Our strengths

Design All models are made in accordance to current worldwide design trends.

Quality Carefully selected materials allows us to achieve the highest quality.

Efficiency Motors used in our products are highly effective. Applied technology allows us to silence them as much as it is possible.

User Comfort Control panels are innovative and intuitive. Most of the products are equipped with touch panels with a number of useful functions such as timer or filter saturation indicator.

Innovation Following the spirit of the time we are applying in our products latest technological solutions, such as: brushless motor, plasma filter, intelligent smell indicator, liquid glass, automatized opening and many more.

New releases
2019

NEW

Ceiling hood SU LIGHT II

The Ciarko ceiling-mounted hood never ceases to amaze its users with its modern and minimalistic design. Thanks to its flat shape, it takes less space than hoods in this class available on the market. The innovative system guarantees fast and efficient installation of the device in the ceiling, while its elegant remote control – comfortable steering. What is more, the motor of the device has a flexible housing unit, which can be installed on the hood or directly on the ceiling, which in many cases could be the optimal solution.

Type:	Ceiling
Colour:	Black / White Glass
Energy class:	A+
Lighting:	WarmLED
Control:	Touch & Remote Control
Efficiency:	789 m ³ /h
Noise:	58 dB(A) / volume level in the third gear

NEW

Ceiling hood SU GLASS II

The elegant, glass finish of the Ciarko ceiling hood impresses every admirer of modern design, although the stunning appearance is not the only thing that matters here. The installation of the device is exceptionally simple and, first of all, safe. It is worth mentioning that the motor housing can be installed both in the hood and directly next to it. What is more, the small device takes less space than other models in this class available on the market. The hood comes with an elegant and handy remote control, which guarantees comfortable steering.

Type:	Ceiling
Colour:	Black / White Glass
Energy class:	A+
Lighting:	WarmLED
Control:	Touch & Remote Control
Efficiency:	792 m ³ /h
Noise:	58 dB(A) / volume level in the third gear

NEW

Ceiling hood STRIPE GLASS

The Ciarko ceiling hood is a special offer for all admirers of modern form. Its minimalist design may prove to be very useful in any modern kitchen. The installation in the ceiling is safe and easy as pie, which facilitates the assembly of the motor housing both in the hood and next to it – according to the user's request. The flat shape of the device takes up much less space than other models in this class available on the market. To choose the right power or intensity of light, it is enough to sit comfortably on the sofa and use the remote control that comes with the device.

Type:	Ceiling
Colour:	Black / White Glass
Energy class:	A+
Lighting:	WarmLED
Control:	Touch & Remote Control
Efficiency:	786 m ³ /h
Noise:	59 dB(A) / volume level in the third gear

NEW

Ceiling hood STRIPE INOX

This modern ceiling hood is an ergonomic solution with minimalist design. It will be a perfect match for open kitchens with an island. Thanks to its flat shape, it takes up less space than devices in this class available on the market. The installation system guarantees a simple and easy assembly of the hood, while the innovative motor housing allows placing it in the hood or directly next to it, in the ceiling. For the consumers' convenience, the device comes with a remote control, which makes it possible to choose the power and intensity of light in an intuitive and comfortable manner.

Type:	Ceiling
Colour:	Inox
Energy class:	A+
Lighting:	WarmLED
Control:	Touch & Remote Control
Efficiency:	786 m ³ /h
Noise:	57 dB(A) / volume level in the third gear

NEW

Hood GC-BOX

The new model of the Ciarko GC-Box hood is a combination of high efficiency and unique comfort of use. The device is equipped with a T-shaped extractor, which saves 20% more space in the kitchen cupboard. GC-BOX has two kinds of steering: a control panel SoftTouch, which allows choosing precise settings and control by gesture GestureControl: it is enough to make three hand gestures to fully navigate the device.

Type:	Built-in
Colour:	Black / White Glass
Measure:	90 / 60
Energy class:	A+
Lighting:	WarmLED 2 x 2.1 3400 K
Control:	Touch Control or Gesture Control
Efficiency:	698 m ³ /h
Noise:	65 dB(A) / volume level in the third gear

NEW

 **CIARKO**[®]

Hood MOONDRAFT

Ciarko Moondraft is the most extendable device in its class on the market which makes it a one of a kind downdraft hood. Thanks to its extension range, the absorption of smells, particles of fat and steam becomes more efficient. Its maximum extension is as high as 50 cm. The professional mechanism installed in the extractor, also used in the automotive industry, makes the device move up and down in a more stable way than in case of standard mechanisms. In this model it is also possible to install the motor directly on the device or at a distance of up to 8 m.

Type:	Downdraft
Colour:	Black
Finishing:	Inox / Glass
Measure:	90
Energy class:	B
Lighting:	WarmLED
Control:	Touch Control
Efficiency:	800 m ³ /h
Noise:	52 dB(A) / volume level in the third gear

NEW

Hood WIZARD

The combination of an induction hob and a hood does not seem to be obvious. However, the duet is a special mix of functionality and, first of all, silence. The Wizard thanks to innovative solutions of process engineers from Ciarko and its new brushless BLDC motor, is one of the most silent devices in its class. Its construction and installation is incredibly simple, which is why the client gets incomparably more space directly under the kitchen top for e.g. an extra drawer for cutlery or spices. Additionally, the device is easily cleanable as filters applied in this model can be washed in a dishwasher and smoothly disassembled.

Type:	Hood & hob in one
Colour:	Black
Energy class:	A+
Control:	Touch Control from the hob
Efficiency:	696 m ³ /h
Noise:	57 dB(A) / volume level in the third gear

NEW

 **CIARKO**[®]

Hood MISS W

The island hood Miss W is a genuine adornment to every kitchen. Undoubtedly, every user will be highly impressed by the uniqueness of its alluring shape and eye-riveting modern lines. The economical and spacious LED panel ensures perfect lighting for the workspace, serving also the function of a designer lamp. The customer can choose between two types of steering: Touch Control control by gesture, i.e. Gesture Control: it is enough to make three hand gestures to fully navigate the device.

Type:	Island
Colour:	Black / White
Finishing:	Inox
Energy class:	A
Lighting:	WarmLED
Control:	Touch Control or Gesture Control
Efficiency:	441 m ³ /h
Noise:	55 dB(A) / volume level in the third gear

NEW

Hood TRIO

The designer chimney hood Trio, in the form of glass and inox elements has become part of the newest trends in the design of household appliances. This model is equipped with effective LED lighting, which not only allows better exposure for the workspace but also constitutes an additional ornament. The intuitive control Touch Control ensures comfortable service, while the Timer function – convenient programming of the device working time.

Type:	Chimney
Colour:	Black / White
Finishing:	Inox
Measure:	90 / 60
Energy class:	A
Lighting:	WarmLED
Control:	Touch Control or Gesture Control
Efficiency:	796 m ³ /h
Noise:	57 dB(A) / volume level in the third gear

NEW

Hood GALAXY

The designer lines of the Galaxy hood are created by combining two structures: metal and glass, which is the perfect solution for modern and minimalistic kitchens. This model will immediately catch the eye of every design expert. The application of brushless motor in the hood facilitates the maximal noise reduction of the device and the high efficiency of its work. Economical LED lighting along with aesthetic and intuitive Touch Control guarantee high comfort of use.

Type:	Chimney
Colour:	Black / White Glass
Finishing:	Inox
Measure:	90
Energy class:	A
Lighting:	WarmLED
Control:	Touch Control
Efficiency:	800 m ³ /h
Noise:	59 dB(A) / volume level in the third gear

Ciarko means Technology

**GESTURE
CONTROL**

CONTROL BY GESTURE

Always at hand

Innovative system of controls

The intuitive system GestureControl facilitates comfortable control of the device. It takes only three hand gestures to switch the hood on or off, change the power of its operation, or the intensity of light. The touchless control system makes it easier to keep the device clean, at the same time fulfilling all the traditional hood control functions.

**BLDC ENGINE
TECHNOLOGY**

NEW BLDC MOTOR

Quiet and energy - saving
Technology for the demanding

The BLDC motor technology applied in Ciarko hoods ensures the highest quality and comfort of use. Thanks to the ball bearings and suspension on anti-vibration mounts, it guarantees an exceptionally quiet operation as well as cost-effectiveness (energy class A++). In the first and the second gear, i.e. the speeds most often chosen by the users, it consumes only 8W and 30W, respectively, which results in the protection of the natural environment and customers wallets.

**DEDICATED
FILTERS**

HOOD-DEDICATED FILTERS

In the service of clean air
Efficient way of recirculation

Filters are one of the most important elements in kitchen hoods. In our offer, you can find new generation filters with the AntiFishMode module, which guarantee total elimination of very intensive and unpleasant smells rising in the kitchen. Plasma filters, in turn, are a solution perfect for people suffering from allergies: not only do they remove from the air 90% of smells from meal preparation but also dangerous allergens and bacteria.

**MODULAR
SYSTEM**

MODULE SYSTEM

A wide range of unlimited possibilities
Adaptable Modular System

AMS is a system, which guarantees the extension of every hood by additional technologies by adding a particular module or modules:

**AIR
QUALITY**

Automatic operation of the hood depending on the amount of vapors evolved during the cooking.

**FIRE
PROTECTION**

In case of fire, the hood disconnects the power supply to the induction hob and sends an SOS message.

**REFRESH
SYSTEM**

Intelligent refresh system. Detects the increase in CO₂ and turns on ventilation.

**BLUETOOTH
SYSTEM**

The ability to control and receive data on your smartphone

**CO
DETECTOR**

Detects any increase in the level of CO₂. Then the hood starts to operate in full speed to clean up the air.

**SMART
HOME**

Integration with Alexa - Amazon's cloud-based voice service. Possibility to control hood by smart home system from Amazon.

COMPATIBILITY WITH THE AMAZON ALEXA

VOICE CONTROL

Right on cue
Innovative system of controls

The assistant of voice commands AmazonAlexa helps the user to control the hood by giving voice commands in English. In this easy way, it is possible to start, suspend or switch off the operation of the device, which might be especially useful for homes for disabled people. Moreover with Alexa, you can ask to play music, hear the news, check weather, control smart home devices, and more. It could also be extremely helpful in doing many activities in the kitchen, where the user's hands are full. This system can be compatible with all Ciarko models with the Alexa built-in module.

**TOUCH
CONTROL**

CONTROL BY TOUCH THROUGH THE STEEL

Technology and design
Modern control panel

Besides functionality and ergonomics, design is extremely important for every interior. Kitchen design is not an exception, which is why we, among only few companies on the market, have the technology to create touch control panels in the hoods with inox steel finish. Thanks to this solution, it is possible to avoid unaesthetic buttons or rocker switches. Not only can it have an impact on the appearance of the device but also on the comfort of use and maintenance of cleanliness.

**STEAM OUT
SENSOR**

STEAM OUT SYSTEM

Control is unnecessary
Intelligent system of hood operation

A system, which autonomously adjusts the operation of the hood to the level of air pollution in the kitchen. Thanks to three innovative sensor of: steam, temperature and humidity the system automatically sets the power of suction and the time during which it remains active. The device recognizes the presence of intensive smells, water vapour and the particles of fat created in the process of meal preparation. It works until the air becomes completely purified and then after 10 minutes it switches off. It is impossible to imagine a comfort of use higher than that of a product which does not require the user's involvement.

LED LIGHT
SENSOR

PROXIMITY DETECTOR WITH LIGHT

Detectable from a distance
Modern technology of LED lighting

In an attempt to meet the consumers' needs, we have developed a system, which activates the LED lighting of the device thanks to the sensor detecting the user's movements. It is enough to move closer to the hood at a distance of 2 meters and the lighting becomes automatically activated. Similarly, if the user backs up, the lighting goes off. It is an excellent solution, which will be applied at the homes of users who appreciate comfort and convenience while engaging in everyday activities in the kitchen.

**DELAY OF
SHUTDOWN**

DELAY IN ENDING THE OPERATION OF THE DEVICE

Efficiently and on time
Functional technology in the kitchen

Technology delaying the end of the time of hood operation. Automatic switch-off after 10, 20 or 30 minutes allows efficient cleaning of air even after the end of the cooking process. It is a very convenient solution, which allows the user to leave the kitchen and not to remember to switch off the hood later: it will be done automatically by the device. It is a sure-fire way to free your kitchen from intensive smells.

**WARM
LED LIGHT**

LIGHTING WARMLED

Warm colours of light
Modern technology of LED lighting

The technology WarmLed is a type of lighting friendly to the hood user. The colour of the generated light is extremely similar to the natural sunshine, which is why it does not strain the user's eyes and evokes a positive mood. This aspect seems to be especially important for people who spend plenty of time in the kitchen. Lighting of this type consumes low energy, which additionally influences the user's budget.
